About

Frontend-focused Software Engineer with a background in Accessible User Experience and a passion for building intuitive, high-quality digital products. Experienced in React, TypeScript, and full-stack development, with a strong foundation in component architecture, scalable frontend systems, and modern development practices. I enjoy collaborating across design and engineering to transform ideas into polished, user-centered experiences.

Education

Thomas More UAS, Mechelen, Belgium — International Digital Experience Design
Feb 2022 - Jan 2026

Sage University, Indore, India — Diploma in Computer Science
August 2018 - July 2021

Experience

Apptweak, Brussels, BE — Software Developer Intern
October 2025 - December 2025

Lionbridge — Internet Accessor
January 2020 - July 2021

Skills

Projects

Type Type — Typing Speed Web Application

React

TypeScript

Vitest

Playwright

Github Actions

- Developed a polished typing application using React and TypeScript with a focus on accessibility, responsive design, and performance.
- Designed a scalable component architecture backed by Test-Driven Development (Vitest), Playwright end-to-end testing, and automated GitHub Actions CI/CD pipelines.
- Currently expanding the platform with real-time multiplayer functionality and additional gameplay features.

Heya — Social Activity Mobile App

React Native

Laravel

MySQL

Websockets

Stripe

- Led technical development as CTO, defining the application architecture and guiding a four-person team from concept to production in an Agile Environment.
- Developed a cross-platform mobile application using React Native with features including real-time chat, push notifications, activity management, and Stripe payment integration.
- Engineered scalable Laravel backend services, RESTful APIs, and an optimized MySQL database, integrating WebSockets for real-time messaging and notifications.
